

JAVASCRIPT

DO YOU
HAVE ANY
CHOCOLATE
DONUTS?

ARRAY · PROTOTYPE · SOME

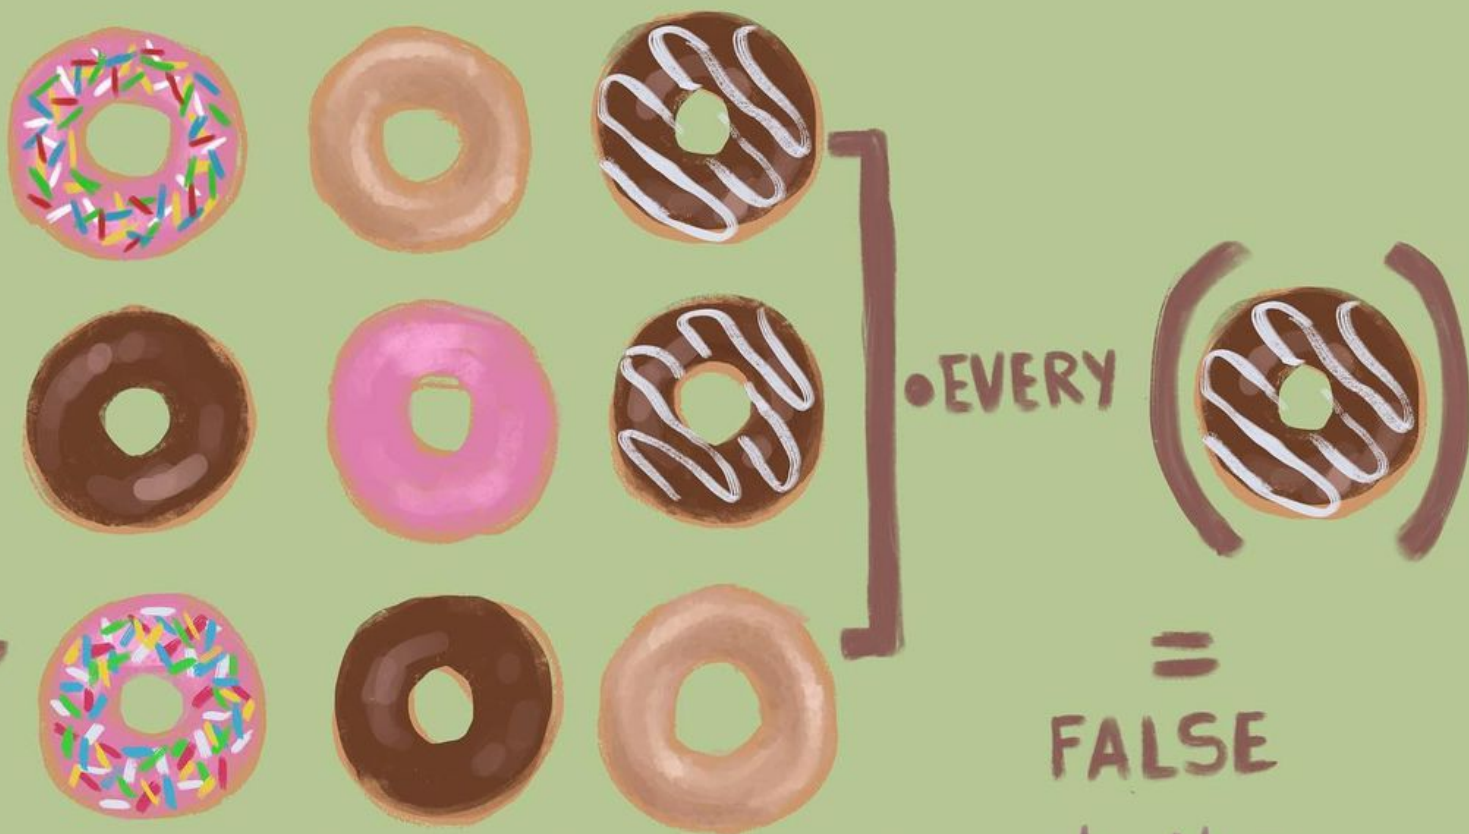

The 'some' method tests whether any element passes the test implemented by the given function.

```
let donuts = ['glazed', 'glazed',  
  'chocolate', 'strawberry'];
```

```
let atLeastOneChocoDonut  
= donuts.some(donut =>  
  donut === 'chocolate');  
//true
```

ARE ALL
THE DONUTS
CHOCOLATE?

ARRAY · PROTOTYPE · EVERY

The 'every' method tests whether all elements pass the test implemented by the given function.

```
let donuts = ['glazed', 'glazed',  
  'chocolate', 'strawberry'];
```

```
let areAllDonutsChocolate  
= donuts.every (donut =>  
  donut === 'chocolate');  
  // false
```
